(54) FLEXIBLE PRINTED WIRING BOARD

(57)Abstract:

PROBLEM TO BE SOLVED: To enable a flexible printed wiring board to be bent easily and to prevent an excessive stress from being applied to a bent part.

SOLUTION: A first slit 5 and a second slit 6 are alternately provided at the center of a flexible printed wiring board 1. The first slit 5 is provided from one side edge 1a of the flexible printed wiring board 1 to the other side edge 1b and a second slit 6 is provided in the opposite direction, namely from the other side edge 1b to one side edge 1a. Tips 5a and 6a of the first and second slits 5 and 6 are formed in a circle. The flexible printed wiring board 1 can be easily bent since the first and second slits 5 and 6 can be easily deformed when being bent and mounted along the edge of a hard substrate and at the same time the generation of an excessive stress at the bent part can be prevented.
